

**ON-DEMAND, BUSINESS-OPTIMIZED, TARGET-SOLVING, THERAPEUTIC ANTIBODIES**

### WHO WE ARE

ImmunoPrecise Antibodies (IPA) enables researchers to discover and develop therapeutic antibody lead candidates by leveraging the advanced IPA technologies optimized for use in OmniAb® transgenic animals, as well as decades of experience, to yield greater candidate diversity in a streamlined, in-house environment, eliminating the need for multiple CRO out-sourcing.

AbVivo creates and licenses high-performance, mono-, bi- and poly-specific antibodies against targets with high human-rodent and intra-protein family homology, as well as other challenges, using industry-leading, avian and rodent transgenic technologies (Ligand's OmniAb). Partners avoid freedom-to-operate risk, animal handling and hybridoma inefficiency.

**Together we offer the only OmniAb-based antibody discovery program in North America and Europe, that creates novel therapeutics on-demand, without traditional development milestones.**

### SCOPE OF OPERATIONS

IPA is an international, full-service, therapeutic antibody company focused on the next generation of discovery, to deliver the most therapeutically relevant antibodies, in a shorter timeline, with the highest probability of clinical success. By partnering with AbVivo, we deliver antibody products which match the specific therapeutic needs of biopharmaceutical partners with flexible terms. Ligand's unique OmniAb platform is a genetically engineered platform for the generation of diverse mono- and bispecific, fully human antibodies, and the industry's only platform comprised of the three species: rats, mice, and chickens.

### PROPRIETARY TECHNOLOGIES

ImmunoPrecise Antibodies has revolutionized antibody discovery and is the true-end-to-end antibody CRO. From target analysis, advanced discovery technologies, lead characterization, optimization, engineering and in vivo analysis, delivering superior products through multi-faceted technologies. We succeed because we have the expertise to provide high-throughput services across the full antibody discovery value chain.
